

AMENDMENTS TO THE SPECIFICATION

As the reviewer has requested, we reorganized and reformatted the specification document so that it is compliant with 37 CFR 1.77(b). Therefore, we wish to withdraw the previously submitted specification and replace it with the substitute specification that was transmitted along with this document. The substitute specification contains no new matter.

The substitute specification also contains page numbers, as requested. We have also added ten pieces of prior art to the Cross-Reference section. These were pointed out by the reviewer as he considered them pertinent to our disclosure. The prior art added to the Cross-Reference sections includes the works of Bennett et al., Getz, et al., Cannon et al., Huang, Lowell et al., Tempest et al., Glasson et al., Jaimet, Cuddy et al., and Weingardt. As previously mentioned, the entire specification has been reformatted and rearranged at the request of the reviewer. All instances of the term "row-and-column (RXC)" have been changed to just "row-and-column".

Some changes were made to the claims section in the specification but those will be covered in the "Amendments to the Claims" section. Attached to the document is, not only a clean version of the substitute specification, but also a marked-up copy of the substitute specification with markings showing exactly what has been changed or added to the text. No markings are made for reorganization of the document as no information was found on how to do so. All changed text within their sections are clearly marked.
